

Climate Monitoring Architecture and the ECV Inventory

Mark Dowell
European Commission
Joint Research Centre

Genesis of the activity

- January 2011 WMO/GCOS Meeting
- Agreed to develop a strategy for climate monitoring architecture
- Identified adhoc group
 - CEOS
 - CGMS
 - WMO Space Programme
- Identified review group
 - GEO
 - GCOS
 - WCRP
- Develop strategy for developing the architecture

No logo / Badgeless Activity

Initial Report Content

- **Executive Summary and recommendations**
- **Introduction, Objectives & Targets**
- **Climate Monitoring Principles, Requirements & Guidelines**
- **State of the Art**
- **Beyond research to operations**
- **Climate Architecture definition**
- **Mechanisms for Interaction**
- **Roadmap for way forward**

Positioning the report

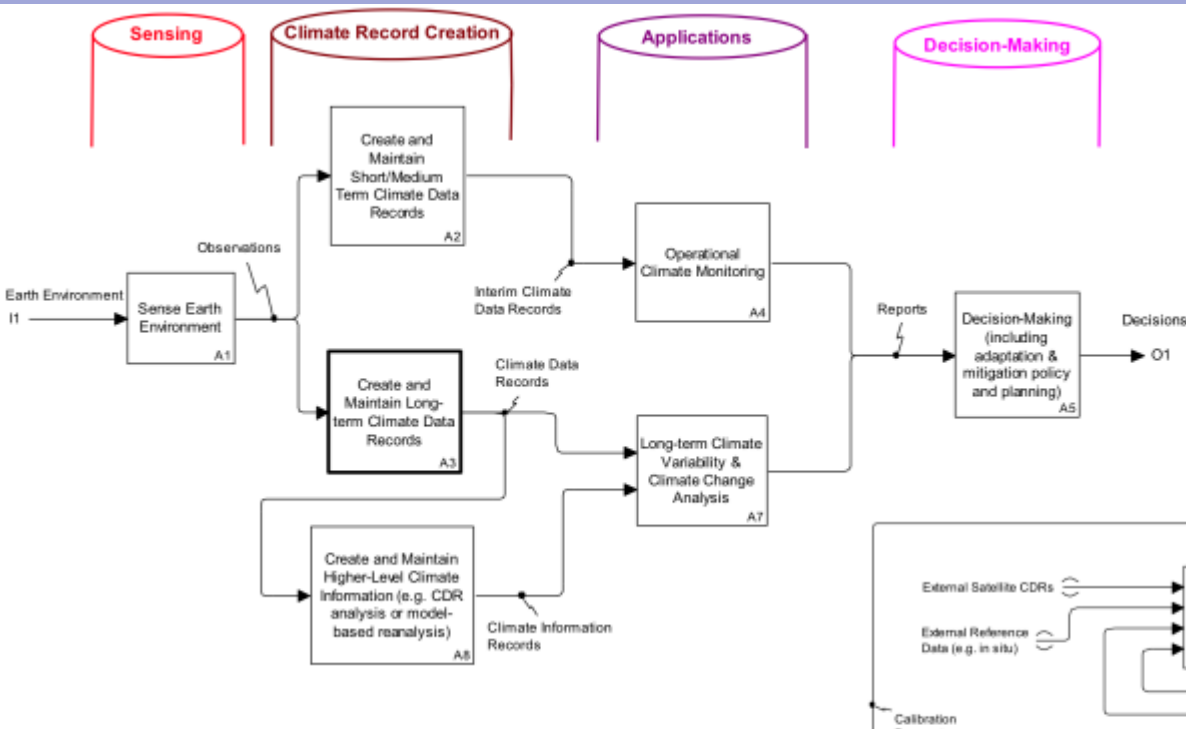

- approach adopted is intentionally open and inclusive
- designed so that all the relevant entities can identify their potential contributions
- even if this maybe beyond their existing capabilities and programmatic obligations
- in recognition of the need to obtain the maximum degree of consensus at this early stage in the process, the level of definition of the architecture is necessarily high-level and conceptual.

Logical and Physical Architecture

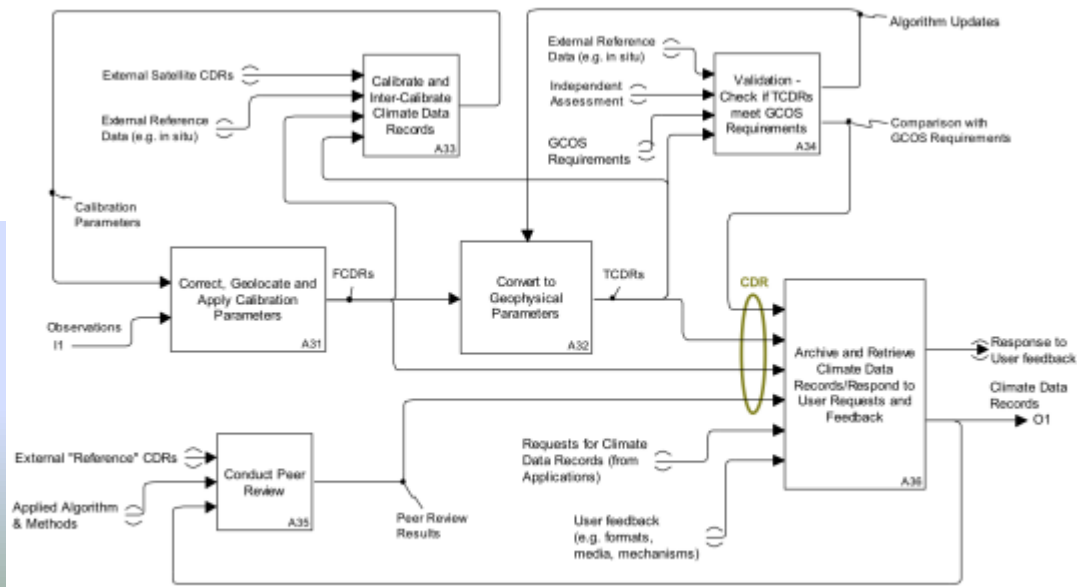

- **logical view:** represents the requirements baseline as a set of interlinked functions and associated dataflows (i.e the target) . Logical view is as stable as the requirements baseline and, once established, should require little maintenance
- **physical view:** describes how the logical view is implemented, i.e. how close we are to achieving the target. Needs to be maintained on a regular basis to make sure it appropriately reflects the prevailing status (will take longer to determine)

Logical representation

Traceable to GCOS Guidelines and GCOS Climate Monitoring Principles

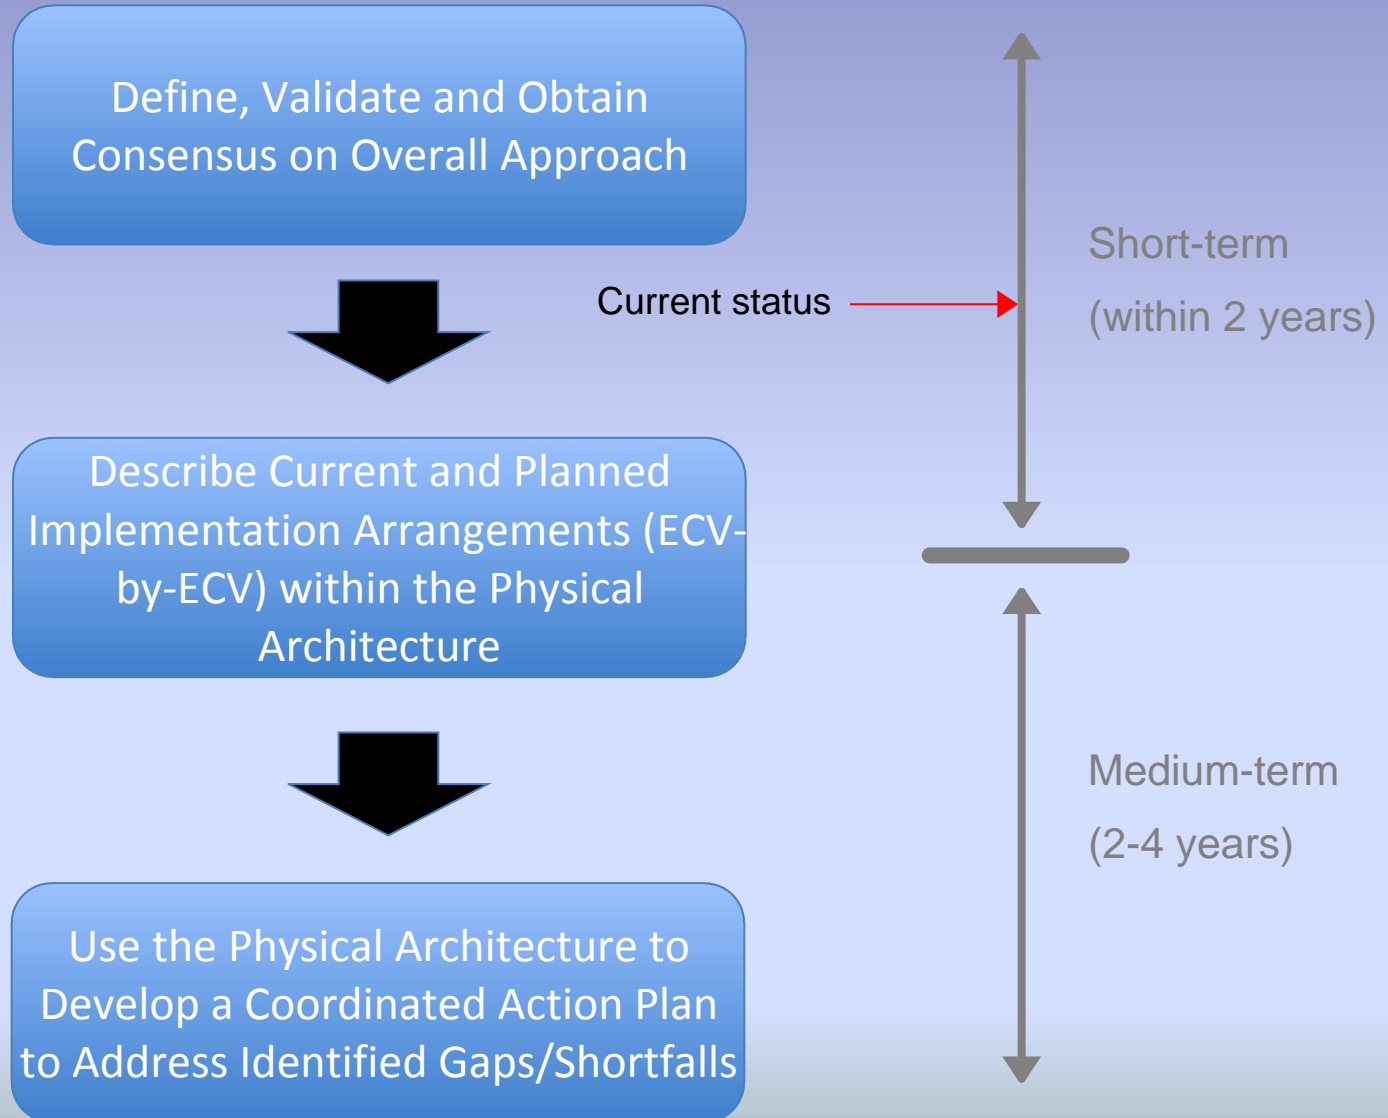

Traceable from ECV Inventory and physical representation of Climate Monitoring Architecture

Recursive Process - Re-processing Synchronised with Reanalysis (where appropriate)

Way Forward

Physical representation (1)

- Main Objective
 - To systematically expose the ECV-relevant data holdings of space agencies to potential users

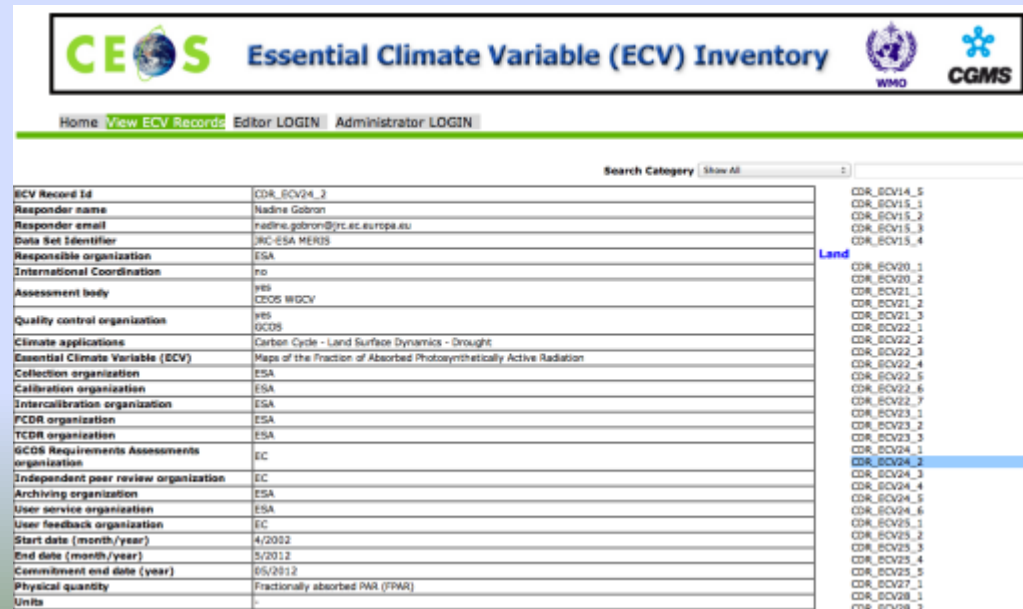

- Methodology
 - Step 1: Invite agencies to populate a questionnaire aimed at characterising the relevant datasets, including:
 - Implementation responsibilities for each of the functions identified in the logical architecture
 - Anticipated usage (relevant ECV, potential applications)
 - Technical properties (accuracy, stability, coverage, frequency, length of record, etc)
 - Admin aspects (access conditions, formats supported, contact points...)

ECV Inventory Questionnaire

- Joint activity with CGMS and WMO
- Call released with MIM in May, responses were due October 5th
- Questionnaire form – through a web interface.
- Responses were requested at the dataset level
- Addresses both existing/past missions and future/planned mission in two separate questionnaires

Areas:

1. General
2. Dataset Usage
3. Dataset Stewardship
4. Dataset Properties
5. Dataset Access

The screenshot displays the 'Essential Climate Variable (ECV) Inventory' web interface. At the top, there are logos for CEOS, WMO, and CGMS. Below the header, navigation links include 'Home', 'View ECV Records', 'Editor LOGIN', and 'Administrator LOGIN'. A search bar is visible with the text 'Search Category Show All'. The main content area shows a detailed record for 'CDR_ECV24_2'. The record includes fields for responder name (Nadine Gobron), email (nadine.gobron@yr.ac.europa.eu), data set identifier (JRC-ESA MERIS), responsible organization (ESA), international coordination (no), assessment body (ICES WDCV), quality control organization (YES GCDS), climate applications (Carbon Cycle - Land Surface Dynamics - Drought), essential climate variable (Maps of the Fraction of Absorbed Photosynthetically Active Radiation), collection organization (ESA), calibration organization (ESA), intercalibration organization (ESA), FCDR organization (ESA), TCDR organization (ESA), GCOS Requirements Assessments organization (EC), independent peer review organization (EC), archiving organization (ESA), user service organization (EC), user feedback organization (EC), start date (4/2002), end date (5/2012), commitment end date (05/2012), physical quantity (Fractionally absorbed PAR (FPAR)), and units (-). On the right side, a list of other records is visible, including CDR_ECV14_5, CDR_ECV15_1, CDR_ECV15_2, CDR_ECV15_3, CDR_ECV15_4, CDR_ECV20_1, CDR_ECV20_2, CDR_ECV21_1, CDR_ECV21_2, CDR_ECV21_3, CDR_ECV22_1, CDR_ECV22_2, CDR_ECV22_3, CDR_ECV22_4, CDR_ECV22_5, CDR_ECV22_6, CDR_ECV22_7, CDR_ECV23_1, CDR_ECV23_2, CDR_ECV23_3, CDR_ECV24_1, CDR_ECV24_2 (highlighted), CDR_ECV24_3, CDR_ECV24_4, CDR_ECV24_5, CDR_ECV24_6, CDR_ECV25_1, CDR_ECV25_2, CDR_ECV25_3, CDR_ECV25_4, CDR_ECV25_5, CDR_ECV27_1, CDR_ECV28_1, and CDR_ECV28_2.

ECV Record Id	CDR_ECV24_2	CDR_ECV14_5
Responder name	Nadine Gobron	CDR_ECV15_1
Responder email	nadine.gobron@yr.ac.europa.eu	CDR_ECV15_2
Data Set Identifier	JRC-ESA MERIS	CDR_ECV15_3
Responsible organization	ESA	CDR_ECV15_4
International Coordination	no	CDR_ECV20_1
Assessment body	ICES WDCV	CDR_ECV20_2
Quality control organization	YES GCDS	CDR_ECV21_1
Climate applications	Carbon Cycle - Land Surface Dynamics - Drought	CDR_ECV21_2
Essential Climate Variable (ECV)	Maps of the Fraction of Absorbed Photosynthetically Active Radiation	CDR_ECV21_3
Collection organization	ESA	CDR_ECV22_1
Calibration organization	ESA	CDR_ECV22_2
Intercalibration organization	ESA	CDR_ECV22_3
FCDR organization	ESA	CDR_ECV22_4
TCDR organization	ESA	CDR_ECV22_5
GCOS Requirements Assessments organization	EC	CDR_ECV22_6
Independent peer review organization	EC	CDR_ECV22_7
Archiving organization	ESA	CDR_ECV23_1
User service organization	EC	CDR_ECV23_2
User feedback organization	EC	CDR_ECV23_3
Start date (month/year)	4/2002	CDR_ECV24_1
End date (month/year)	5/2012	CDR_ECV24_2
Commitment end date (year)	05/2012	CDR_ECV24_3
Physical quantity	Fractionally absorbed PAR (FPAR)	CDR_ECV24_4
Units	-	CDR_ECV24_5
		CDR_ECV24_6
		CDR_ECV25_1
		CDR_ECV25_2
		CDR_ECV25_3
		CDR_ECV25_4
		CDR_ECV25_5
		CDR_ECV27_1
		CDR_ECV28_1
		CDR_ECV28_2

How will we use the ECV Inventory

1. Describes the current and planned monitoring capability on an ECV basis (allow easier response to e.g. GCOS IP)
2. combined perspective of the logical and physical views should enable the definition of an optimum “macroscale” space system configuration and its components
3. used at the ECV/product level to identify gaps and shortfalls
4. formulation of a coordinated action plan to address such gaps and shortfalls...
5. trigger for the medium-term activities that need to be undertaken to sustain the long-term implementation of the architecture

ECV Inventory Response so far (1/2)

- ECV inventory now contains 171 records submitted for 11 responsible organizations
- No records were submitted for the following ECVs: carbon dioxide, methane, and greenhouse gases; sea state; sea surface salinity; lakes; above ground biomass; ice sheets
- Some records are incomplete and we encourage organizations to continue submitting data so we may begin conducting analyses
- Some organizations have stated this is a partial submission list and require more time

ECV Inventory Summary

Domain	ECV NAME	Number of Records
Atmosphere	Surface Wind	18
	Upper-air temperature	6
	Water vapor	12
	Clouds	31
	Precipitation	6
	Earth radiation budget	23
	Ozone	11
	Aerosols	12
	Upper-air wind	1
Ocean	Sea-ice	6
	Sea level	4
	Sea surface temperature	5
	Ocean Color	4

ECV Inventory Summary

Domain	ECV NAME	Number of Records
Land	Glaciers and ice caps	2
	Snow extent	3
	Albedo	7
	Land cover	3
	FAPAR	6
	LAI	5
	Fire disturbance	1
	Soil moisture	2
	Land surface temperature	3

ECV Inventory Response so far (2/2)

- We are prepared to continue to accept entries from agencies (including to complete those currently entered as placeholders) until the end of this calendar year.
- A concern is that for many Agencies we still don't have specific p.o.c for the ECV Inventory
- We will start our analysis on the datasets available in January.
- We expect to have some preliminary results to show at SIT-28 with a full analysis by the respective CEOS and CGMS 2013 Plenaries

Next meeting

- Planned joint meeting adhoc Climate Monitoring Architecture group, WGClimate-3, SCOPE – CM, WCRP-WDAC
- 18th-22nd February at WMO in Geneva, “Climate from Space” week
- Joint adhoc Climate Monitoring Architecture & CEOS WGClimate for first analysis of material from ECV Inventory

Points for Discussion

1. ECV Inventory – additional time until end of the year
2. Help is available, please confirm p.o.c
3. Additional CGMS Agency involvement for the analysis phase of ECV Inventory is welcome (see Feb. 2013 meeting)
4. Further discussion required on mechanisms of interaction/governance: Architecture activity (CGMS-CEOS-WMO), WGClimat-SCOPE-CM Phase 2, GFCS Engagement

Present List of Participants

- EC – Mark Dowell, Chair
- ESA – Pascal Lecomte
- EUMETSAT – Joerg Schulz, Robert Husband
- JMA – Yoshihiko Tahara
- NASA – Richard Eckman, Eric Lindstrom
- NOAA – John Bates, Suzanne Hilding, Chuck Wooldridge, Mitch Goldberg
- INPE – Daniel Alejandro Vila
- WMO – Jerome Lafeuille, Barbara Ryan, Tillmann Mohr, Hye Jin Lee
