The papers in this book comprise the proceedings of the Sixth International Winds Workshop. They reflect the opinions of the authors. They are published as presented, without changes to the contents, only occasional changes to the layout, in the interest of timely dissemination. Their inclusion does not necessarily constitute endorsement by EUMETSAT.

The cover picture presents Atmospheric Motion Vectors derived from MODIS water vapour images associated with sequential passes of the Terra polar-orbiting satellite over the North Pole.

The plotted vectors represent a layer between 300 and 700 hPa, and the density has been thinned for presentation. The geographic coverage represents the complete accumulation of observations over a one day period (March 19, 2001).
